This supplementary material provides details on the results obtained with ILSr, MAr, CD-RVNS and MA-EDM. The algorithms were run for a period of four hours with nine instance packages: IO, MB, SGB, Spec, RandB, RandA1, RandA2, xLOLIB and xLOLIB2. The following tables show, for each method and instance, the best result attained and the current best-known solution (BKS). Additionally, in the case of MA-EDM, the mean and worst solutions are also shown. The cases where the BKS is attained are shown in bold face. Moreover, those cases where a new BKS is found are indicated with an asterisk.
